ABSTRACT

Abstract

This study aims to determine the effect of productive cash waqf on the welfare of the Waqf DIY agency. This research is a descriptive study with a quantitative approach. The population in this study is mauquf'alah who received the Protab Program from the DIY waqf institution. The sample in this study were 30 respondents who were taken by purposive sampling technique. The instrument used in this study was a questionnaire / questionnaire. Data analysis techniques in this study used the CIBEST model approach and correlation analysis.

The results of the study show that: (1) The welfare condition of the Islamic board of trust after receiving the endowment of cash earning has increased compared to the previous condition. This is reflected in changes in the value of the CIBEST poverty index in the scope of families and individuals. (2) There is a relationship between endowments of productive cash with material welfare within the scope of the family, individual heads of households, and individual family members 1. In addition, there is also a relationship between endowments of productive cash with spiritual welfare within the scope of the family and individual heads of families, and family member 1, family member 2, and family member 3.
