## **ABSTRACT**

During the COVID-19 pandemic, the learning system carried out in schools is required to be implemented remotely. For this reason, teachers need to prepare learning designs that involve IT in it but still pay attention to learning that is not boring. Therefore, as a teacher, expertise is needed in utilizing several e-learning systems and managing them into fun learning in the learning process. The training objectives for the preparation of this IT-based fun learning design include; 1) understand the concept of fun learning that is integrated with the use of IT in it, 2) compile a fun and integrated learning design with IT in the process of teaching and learning activities. PPM activity methods, namely; 1) lectures, discussions and questions and answers; 2) demonstrations and tutorials, and 3) practical activities for making learning designs. This training activity was carried out within one week with one face-to-face meeting and 5 days of mentoring activities carried out on July 4, 2020. After this training was carried out, the teacher produced a product in the form of a learning implementation plan (RPP) during the implementation of distance learning.

*Kata Kunci: training, joyful learning, e-learning system integrated*
