

REFLECTION ON THE IMPLEMENTATION OF AQUATIC COMPETENCE PHYSICAL EDUCATION IN AN EFFORT TO FULFILL SOCIAL RESPONSIBILITIES AND PREPARE STUDENTS TO FACE THEIR LIFE CHALLENGES

by Dr. Muhammad Hamid Anwar, S.Pd., M.Phil, Fathan Nurcahyo, S.Pd.Jas, M.Or, Caly Setiawan, S.Pd., M.S., Ph.D

ABSTRACT

The aim of this research is to try to reveal how far physical education teachers understand their educational responsibilities in relation to this social reality. Furthermore, aquatic competence is taken to be explored and used as an example to see to what extent the practice of understanding social responsibility and efforts to prepare students to face life's challenges are realized. The method that will be used in this research is exploratory descriptive research. It is hoped that the primary data that will be drawn in this research will include two things, the first is the mastery of school students' competencies (elementary, middle and high school) in the field of aquatics. Furthermore, the second data to be achieved is a reflection of the teacher's interpretation and attitude towards the mandate to fulfill aquatic competencies in the physical education curriculum. For the first data, an instrument in the form of a questionnaire will be used in data collection efforts, while for the second data target, in-depth interview techniques will be used. The first data analysis will use a simple percentage technique, while for interview data the data analysis process will be carried out according to qualitative data, successively including; transcription, reduction, coding, classification, display, and interpretation. In the final stage, the two data interpretation results will be used together to reflect on and be used to answer research questions.

The expected result in this research is a simple but clear picture of the students' mastery of aquatic competence. Apart from that, an overview of the concept and implementation of teachers' understanding of efforts to fulfill aquatic competencies in the physical education curriculum. It is hoped that the results of this research will be an evaluation of the educational implementation process in schools related to physical education in particular, and school educational practices in general. Furthermore, from the results of the images produced from this research, concrete recommendations for educational practice can be formulated by referring to the needs of students facing the challenges of the natural and social environment.
