

# Simple Image Animation Training for Online Learning during the Covid-19 Pandemic

by Amir Syamsudin, Joko Pamungkas, Harun, Sudaryanti, Prayitno

## ABSTRACT

*The purpose of this community service is to share knowledge and experience designing and implementing online learning for early childhood in the Covid-19 pandemic situation. The implementation method consists of explaining the concept of online learning for early childhood, online learning simulations through peer teaching, and online learning practices with direct children. The target audience is early childhood teachers who are members of the Yogyakarta branch of the Indonesian Kindergarten Teacher Association. Implementation of activities in July 2021 offline. The result of the implementation is that simple image animations can help teachers create tools for children to study at home during a pandemic. The advantage of making your own animation is that the animation content is according to the child's interests, it is close to the child's life, and parents also understand what to do when accompanying their child to study at home. The suggestion for this activity is that the duration is extended to 3x24 hours and participants are selected according to their level of computer literacy.*

Kata Kunci: *picture animation, teacher-child, online learning.*
