

Training and assistance in making organic fertilizers using EM-4 technology in Tandon Hamlet, Pare Village, Selogiri District, Wonogiri Regency

by Eko Widodo, Suranto Aw, Benni Setiawan

ABSTRACT

The dependence of the community on chemical fertilizers needs the attention of universities. The reason is, chemical fertilizers can reduce soil fertility. Therefore, universities need to train and assist the community in switching to using organic fertilizers. Training and assistance in making fertilizers is an effort to reduce community dependence on chemical fertilizers. Also, this training and mentoring are to process the region's potential, in this case, manure, to increase the community's productivity and economy. The results of this training and mentoring show that the partnership between universities and the city is essential. This partnership makes the community more independent and competitive. Also, this training and mentoring program shows the university's commitment to improving the city's dignity.
