ABSTRACT

This study aims to analyze the academic quality of international students at Yogyakarta State University. This research is a quantitative research. This research focuses on the percentage of mortality during registration and registration, the percentage of mortality between registration and the lecture process, the percentage of mortality between lectures and graduation including mortality factors, as well as the percentage of graduating foreign students at the university, faculty and study program levels. The analysis in this study was carried out quantitatively to calculate the percentage of several aspects using Microsoft Excel. While the causal factors were analyzed qualitatively with the theoretical framework and existing academic regulations at Yogyakarta State University. The results of the research show that the causes of the mortality of foreign students are difficulties in adapting and the low ability to communicate using Indonesian. The learning activity of foreign students does not show a high or low trend. While the ability of alumni in the world of work shows a good level.

Kata Kunci: *foreign students, mortality, active learning*
