

Determination Factors of Supporting and Inhibiting Creativity in Designing for UNY Indonesia and Yuntech, Taiwan Students

by Mohammad Adam Jerusalem, Widiastuti, Triyanto, Asri Andarini Nurlita, Li-Hsun Peng

ABSTRACT

This study aims to determine the determinants of supporting factors, inhibiting factors, and to find out what internal and external factors most influence creativity in designing for students at UNY, Indonesia and Yunlin, Taiwan. Considering that UNY and Yuntech Taiwan have design-based study programs, the results of this study can be valuable input for classroom learning regarding the determinants of supporting factors and inhibiting creativity in design. This research is quantitative that implement correlational descriptive as the approach. This research will identify the supporting and inhibiting factors, determine the most dominant factors both from the supporting and inhibiting factors, and investigate the factors that have the most influence on creativity in designing. The conclusions formed based on the results of the previous discussion show that the hypothesis states that internal and external factors partially influence as factors supporting and inhibiting creativity in designing for UNY and Yuntech Taiwan students.
