**ABSTRACT**

The Ringinlarik Embung is one of the infrastructures built by the Boyolali Regency Government starting in the 2016 fiscal year and completed at the end of 2020. The Boyolali Regency Public Works and Public Housing Service has completed the construction of the Ringinlarik Embung which aims to provide benefits as a water reservoir and fulfill raw water needs in the surrounding area. the region.

The implementation of Community Service activities with the title "Planning the Ringinlarik Embung Water Tourism Area Site as an Effort to Develop New Tourism Objects in Boyolali Regency in the New Normal Era" aims to provide assistance to Ringinlarik Village residents regarding planning water tourism areas that apply new normal standards. With the site planning of the tourist area, it is hoped that it can be used as a pilot for the Ringinlarik Tourism Village, which indirectly provides more attractiveness to tourists so as to improve the economy of the local community of Ringinlarik Village.

The results of this area development PPM activity are: (1) Ringinlarik Village Government has a water tourism area development plan based on the planned site; (2) Possession of a master plan for the planning of the Embung Ringinlarik water tourism area in accordance with New Normal standards; (3) Can help provide alternative design choices for the space zone of the Embung Ringinlarik water tourism area; (4) The emergence of public awareness of the standard of facilities and infrastructure in the New Normal era.
