ABSTRACT

The purpose of this research to know relationship of intelligence adversitas and learning climate to the behavior of delaying completion of academic tasks of students, and to know the condition of climate study in electro department of YSU. The method used by the questionnaire is quantitative to obtain the respondent's response. Place of study in the Department of Electrical Engineering Education using sample Mechatronics class of 2014 and Electro class of 2015. Data analysis technique using quantitative descriptive analysis. The results of this research is a adversity intelligence seen from the self, the habits, the duties, the self-factor and the responsibility of the students is well, this is in line with the average length of the student study in 2017 is 4.3years. Factors that support a good learning climate have been given and self-awareness factors are classified.
