

Perceptual MOTOR ACTIVITY-BASED SOCIALIZATION EXECUTIVE Functioning IN GURUTAMAN Even Children CLASS B IN THE DISTRICT SEDAYU, Bantul,

by B.Suhartini, Farida Mulyaningsih,

ABSTRACT

Child is a unique individual, and has cirikhas tersendiri. Kajian about anak elalu interesting thus giving rise to various views on the nature of a true sense anak. Guru kindergarten as educational actors who are directly dealing with children is very important to understand it in accordance with the developmental tasks of children at each level of a certain age children. Often teachers are stuck in a routine that does not refer to the needs of individual children and groups, will create an even boring for anak. Hal learning was due to the day to day activities remain the same without challenging or interesting activities.

Early childhood education is one form of organization of education that focuses on towards pertumbuhan and physical development (coordination of fine and gross motor, perceptual motor), intelligence (dayapikir, dayacipta, emotional intelligence, spiritual intelligence), social emotional (sikap dan behavior and religion) language and communication, according to the uniqueness and the developmental stages through which early childhood. The education system form the foundation of a child, the foundation must be strong enough, shock resistance that would later give birth to the golden generation of productive and qualified. Executive Functioning train children to focus, unable to control themselves, think logically and reliability with flexibility-flexibility berfikir.

Anak since birth has been living in a civilization that is always busy with a variety of commands making it difficult to focus, the message received by the level of competition is much heavier than on the dewasa. Pendidikan basically not "what to think" but rather "how to think". Some types of motor perceptual activity is expected to train executive function in kindergarten children.
