ABSTRACT

The purpose of this training is to provide training on the preparation of an Android OS-based assessment instrument for online learning in the New Normal Era for private elementary and junior high school teachers in Kulon Progo. The training activity for the preparation of the assessment instrument was carried out online which was attended by 25 elementary and junior high school teachers from 11 different schools in Kulon Progo Regency. The method used in this training is to provide practical theory of assessment techniques in online learning, practical theory of how mobile phones work based on Android OS, data processing and preparation of assessment reports. The training activities were carried out for two theoretical days, 14 days of mentoring and implementation of the results of the training by the teacher during two meetings. Based on the responses obtained through the questionnaire, as many as 21.1% of the training participants really understand how to make a class on the google form, as many as 68.4% of participants understand, and 10.5% of participants who still do not understand. Based on the results of the evaluation, it was found that the completeness of the training materials from start to finish received a score of 8 out of 10. So the training materials provided from beginning to end were complete. This is reinforced by the readiness of 94.7% of the trainee teachers to practice the results of the training in learning in schools.
