ABSTRACT

In the Bachelor of Arts Education study program, there are three main study focuses that need to be synergized in a student's final project or thesis, namely the creation of fine arts, art education and art research. However, in the current guidelines for thesis research, there is no method that facilitates the creation and education of fine arts at the same time. In fact, the creation of fine arts where students are also active actors is an activity that methodologically can build knowledge and theoretical and practical capital in education. Therefore, this study aims to develop the concept and form (format) of art-based education research for lecturers and students of the Fine Arts Education Study Program by utilizing the concept of art-based research (ABR). This study will use the Research and Development (R&D) research method of the ADDIE model which consists of five stages of the development process, namely analysis (analysis), design (design), develop (development), implement (implementation), and evaluate (evaluation).
