ABSTRACT

ASEAN Economic Community (AEC) that have prevailed at the end of 2015 bring many consequences in flow of products, services, and human resources across ASEAN countries. Everyone can freely sell their products and use employments from ASEAN countries. This condition can enlarge employment opportunities, but it can threaten less skilled human resources position in a particular country. To confront the invasion of foreign workers from several countries, it is necessary to put up candidates who have qualified workforce that can be accepted in other countries. This article aims to reveal the students readiness in the face of the Asean Economic Community.

The method used to reveal the students readiness in the face of Asean Economic Community (AEC) was done by survey. The aspect that were measured included knowledge, skills and mental. Data were collected by questionnaires from students of Faculty of Engineering Yogyakarta State University randomly.

The results showed the readiness of students in the face of the Asean Economic Community can be categorized high with mean average score 2.99 (74.5%). In detail can be explained, readiness of students in the aspect of knowledge can be categorized high with average score 2.99 (78,5 %), the readiness of the students in the aspect of skills can be categorized high with average score 3.13 (78,5 %). The readiness of the students in the aspect of mental can be categorized high with average score 2.92 (73 %) and readiness in aspect of additional work support can be categorized high with average score 2.92 (73 %).

Kata Kunci: *workforce, student readiness*
