ABSTRACT

Product development and manufacture are carried out in order to add value to a product. The product developed in this study was the masked instant pashmina (Pashiner). This research is based on the current COVID-19 pandemic, which requires people to always wear masks. This was done in order to minimize the spread of COVID-19. This research is a development research that produces a masked instant Pashmina prototype (Pashiner). The prototype Pashiner was successfully developed through data collection methods and literature study, analysis and design and implementation. Data collection was carried out by interview method. Literature study was carried out by studying the basic theory of pattern making, and the technique of making Pashiner both from cutting, sewing and finishing. The analysis was carried out to find the conditions that have occurred, namely the occurrence of the COVID-19 pandemic, which requires humans to wear masks. After being analyzed, the authors formulated the functional requirements that must be developed in Pashmina to deal with the current pandemic. Requirements and functions of the Pashiner apart from the hijab, it also functions as a mask

Kata Kunci: *COVID-19, Pandemic, Mask, Pashmina, Pashiner*
