ABSTRACT

Online learning is one of the most widely used methods today. Through the facilities provided by the system formed in online learning, students can study anytime and anywhere without being limited by distance, space and time. The learning material being studied is also more varied, not only in verbal form, but also more varied, such as visual, audio, and motion. Therefore, teachers feel the need to master how to provide online learning for their students. On this basis, it is necessary to hold training in the introduction of learning management systems (for example Schoology) for teachers. The purpose of this training is to introduce schoology as a medium for electronic learning and to train participants to be able to take advantage of the facilities available at LMS Schoology.
