

DEVELOPMENT OF A PROJECT BASED LEARNING MODEL LEARNING (PJBL) TO IMPROVE CAREER KNOWLEDGE AUTISM STUDENTS

by Edi Purwanta, Diajeng Tyas, Sukinah

ABSTRACT

The purpose of this study is to determine the form of implementation of the project based learning (PjBL) model in introducing the careers of autistic students. This study used survey research methods. This research is a research and development (Research and Development) using the ADDIE model. The form of implementation of career learning models for autistic children in schools today is in the form of adjustments to the scope of learning materials, adjustments to learning media, and various learning methods. The implementation is carried out in conjunction with school efforts in preparing the careers of autistic students such as: Collaborative efforts, Efforts to build social and communication skills, and Efforts to identify interests and talents. Most educators have heard of the PjBL learning model, but have never applied the model to career learning materials for autistic learners, so there needs to be an understanding of the model.
