

INCREASING WOMEN'S ROLE IN ENVIRONMENTAL MANAGEMENT In Jetis Suruh, Donohardjo, Ngaglik, Sleman DIY

by Dr. Hastuti, M Si

ABSTRACT

Community service activities in the form of assistance on improving the role of women in environmental management aims to provide knowledge and skills in the management of yard for increasing household income and environmental sustainability. Target audiences in this PPM activity are women housewives in Dusun Jetis Suruh, Donohardjo, Ngaglik, Sleman, DIY totaling 30 people. Assistance in environmental management is done by lecture method, demonstration and practice with question and answer. The lecture method is used to explain the concept of environmental management. Demonstration method is used to indicate a work process in environmental management. The availability of sufficient experts in environmental management in the FIS Geography Education Department, the enthusiasm of the participants, the support of the hamlet head and the local government and the supporting funds of the faculty is a support for the implementation of this PPM activity. The obstacles faced are women do not have the initial knowledge about environmental management and the use of yard properly and limited time for training. Benefits that can be obtained from the PPM activities, among others, can manage the environment and utilize the yard according to the rules of environmental sustainability.
