

# **Interesting PowerPoint Development-Interactive As A Learning Media for MPS Teachers MGMP Kebumen District**

**by Agus Sudarsono**

## **ABSTRACT**

IPS learning in junior high school (SMP), is generally considered boring and underestimated by most students. IPS is considered unattractive because it contains only years, a series of events and events, figures, dry facts. Most teachers who teach social studies subjects are still monotonous, do not provide factual examples, and do not use instructional media that can increase students' motivation and interest in this lesson. Therefore training of power point media development is expected to encourage IPS teachers in Kebumen district to create and develop power point media and use it in the learning process so that IPS learning activities are expected to change become more interesting and meaningful.

The devotional activities are conducted with lectures and frequently asked questions, demonstrations, training and tutorials and media-making practices. Due to time constraints, then the practice activities continued with the independent tasks whose products are sent via email to the team devotee in FIS UNY. Training and tutorial activities were held on 10 August 2017 at the Meeting Hall of SMP Negeri 2 Adiwarna Kebumen.

In general, teachers feel enthusiastic about following this devotional activity which is shown by their activity in training and tutorial. They also follow up with the practice of making the media independently and consult the team of devotees in the assistance of media development. They consider this activity as very important to improve their competence as teachers who must design and implement pedagogical activities. Making media is one of the series of activities so that help improve their skills and competence. It is expected that this activity there is a follow-up so that in the future IPS teachers in Kebumen Regency can also make other IPS learning media.
