## **ABSTRACT**

This study aims to produce a model of specialization for high school students. The research method used is the Borg & Gall development research method. The research procedure used is conducting literature review and preliminary studies, planning, developing the initial model, validating the model, revising the model, testing the model to the research subject, revising the model, and finalizing and socializing the model. The results of this study indicate that the specialization model for high school students that was developed can provide specialization recommendations that are appropriate to the students. The results of the specialization mapping show that 97% of the research subjects of the specialization model are suitable.
