

LEARNING VIDEOS AND INTERACTIVE QUIZZES ASSISTED BY LUMI SOFTWARE

by B Sumarno HM S Andayani NH Waryanto Thesa ASY

ABSTRACT

The Information and Communication Technology (ICT) infrastructure developed by the government during the Covid-19 pandemic still needs to be empowered, especially in the field of education. The availability of online or hybrid/blended learning content should continue to be promoted so that ICT facilities can be optimized as a source of learning and teaching. Most of the existing educational videos are not interactive because they are still dominated by the delivery of learning materials without incorporating student interactions with the content in the instructional videos.

The availability of training in developing interactive learning videos and quizzes using Lumi software can broaden teachers' awareness of Lumi as a powerful and user-friendly assisting software. The ability to use Lumi will provide teachers with the convenience of creating interactive learning content that can engage students more effectively while watching instructional videos.

The ability of teachers to develop learning content in the form of videos and interactive quizzes using Lumi can expand the set of development-assisting software. The interactive videos and quizzes produced can enrich the collection of educational media and can be used as supplements in offline, online, or hybrid/blended learning environments.
