

A Mindset Education Model for Character Building of the Students of Yogyakarta State University, Indonesia

by Sekardi, Syukri Fathudin Achmad Widodo dkk

ABSTRACT

Abstract. This research aims to develop a positive mindset education model that supports sustainable career development and to reveal its effectiveness in educating the positive mindset that enhances student's carrier development sustainably. It is population research employing Fleming Model. The research subjects include 35 fourth semester students and 50 second semester students of the Department of Mechanical Engineerring, Faculty of Engineering, Yogyakarta State University. The data were collected by surveying the Internet sites that correlate with the future, negative thinking, and work hunting. The developed model consists of the sub-system, specific information, main theory, figure/motivator, repetition, and Internet sites. The model shows its effectiveness after four times of repetition.

Kata Kunci: *career development, character, education, mindset, model*
