

TRAINING TO MAKE A LIGHT VEHICLE ENGINEERING LEARNING MODULE AUTOMOTIVE CHASSIS SUBJECT

by Sukaswanto, Martubi, Kurniawan Sigit Wahyudi

ABSTRACT

The problem faced at SMK Muhammadiyah 1 Sleman is the lack of learning modules that are easy to understand and relevant to the current curriculum. Apart from that, students also have difficulty understanding and applying the material that has been taught. This results in low student interest in learning and performance in automotive chassis subjects. The aim of the Off-Campus Lecturer Program is to provide training and create learning modules that are interesting, easy to understand, and relevant to the current curriculum.

The target audience for this activity is teachers at SMK Muhammadiyah 1 Sleman Special Region of Yogyakarta. The activity method carried out in this Off-Campus Lecturer activity is the focus group discussion, workshop and validation method. This training activity has been carried out well. The results of the Evaluation Questionnaire show that the lecturers' activities outside campus are in line with school needs and have good indicators of achievement.
