

DEVELOPMENT OF SPECIAL TALENT TRAINING INSTRUMENT FOR ELEMENTARY SCHOOL STUDENTS

by Nawan Primasoni

ABSTRACT

This research has the purpose to develop the form of instruments used in measuring the coaching interest of special talent sports students (elementary school). The method in this study is using a research and method developed by Borg & Gall (1983:775), with the following steps: 1) Research and Information Collecting, 2) Planing, 3) Develop, preliminary form of product, 4), preliminary field testing, 5) Main product revision, 6) Main field testing, 7) Operational product revision, 8) Operational field testing, 9) Final product revision, 10) Dissemination and implementation.

This study contains tests that contain cognitive, affective and psychomotor events from prospective athletes, so that they can channel talents according to the sports that correspond to their ability tests.

The ten-point in the development will be summarized in three main phases, namely knowing the building instruments of special talent of sport for the existing elementary school students, design a model of the sport's survival test, and know the effectiveness of the model of sport survival test students designed.

Kata Kunci: *SPECIAL TALENT*
