Sociodemographic Factors of Smoking Prevalence in DIY

by Adi Cilik Pierewan, Nur Hidayah, Grendi Hendrastomo

ABSTRACT

Smoking is one of the serious problems faced by government and society and has a negative impact on health. This study aims to examine the socio-demographic factors that influence smoking prevalence in DIY. We use data from National Social-Economic Survey 2020. Data analysis uses quantitative modelling using the probit regression approach and longitudinal modeling. Expected results of this study are to become policy recommendations for the government and even universities in reducing the prevalence of smoking in Special Province of Yogyakarta.
