ABSTRACT

This Community Service Program is motivated by the limited space for teachers to develop their capacity and competence due to the impact of Covid-19. Meanwhile the teacher is the main milestone in the realization of educational goals. The quality and pedagogical competence of teachers should be improved considering the increasingly diverse demands for education, one of which is distance learning during the pandemic. Based on these conditions, this education program focuses on online training (online) to develop teacher pedagogical competencies during the Covid-19 pandemic. The implementation method uses the blended learning model which is equivalent to 32 JPL. Evaluation and measurement of understanding using a questionnaire tailored to the material and targets that have been set. Assignments were given to participants in the form of making a one-sheet lesson plan as a final output based on learning technology. This activity was carried out for seven meetings on September 14-30, 2020 with teacher participants in various kinds of subjects, both representatives of elementary, junior high and high school levels.
