

The Concept of Cybergogy Learning in the Implementation of Online Learning in the Era of the Pandemic

by NH Waryanto, H Retnawati, W Setyaningrum

ABSTRACT

The learning paradigm in the 21st century requires technology and the use of appropriate learning models in education . Therefore, the teacher must be able to choose the benefits of the learning model that will be applied. One of the learning models that can be used is the Cybergogy model, which is a learning model to create a conducive learning atmosphere to generate innovation and generate knowledge and emotions of students who use technology to conduct virtual learning. Cybergogy integrates the latest technology in learning that can easily help students understand learning materials independently. through virtual learning. This model is in line with constructivism theory thinking which requires students to be intensively involved in building their knowledge according to their experience and applying it to new conditions.

This research method uses quantitative research methods using survey i design . The purpose of the study was to determine the profile map of the mathematics teacher's initial understanding of the concept of cybergogy.

The results showed that the initial understanding of junior high school mathematics teachers in Yogyakarta on the concept of Cybergogy for cognitive aspects was in sufficient criteria, Emotive aspects were in good criteria and Social aspects were in good criteria.
