

Professional Development Training for Vocational Teachers to Support Student Creative Products at Pringsurat Temanggung State Vocational School

by Pramudi Utomo, Umi Rochayati, Suprpto, Masduki Zakarijah, Mashoedah

ABSTRACT

The changes that occur in the SMK environment have raised classic learning problems. Problems include the readiness of teaching staff, students (raw-input), facilities, classrooms, laboratories, infrastructure, learning resources, and other supporting environments. The objectives of the activity are oriented towards realizing lecturer for activities outside the class with the achievement of: 1) providing an understanding of innovation in implementing technical and managerial learning, 2) optimizing the potential that exists in the school environment, 3) empowering the application of teacher innovations within the scope of learning held in schools, 4) provide an understanding of creative products that students can develop. Implementation of PPM is carried out by solving problems in the form of training related to: 1) developing and strengthening the professionalism of vocational teachers, and 2) efforts to develop students' creative products. The activities approach was chosen in the form of workshops or training either through theoretical presentations or in the form of actions/practices. Based on the results of training and workshops it can be concluded that synergy between professional teachers and students' holistic enthusiasm for learning can produce graduates who are ready to make changes happen. This form can be seen from the emergence of creativity by students in the form of works that are ready to be displayed in the production unit.
