

Increasing the Capability of Production of Wood Crafts UKM Through Appropriate Technology Design Training

by Paryanto, Aan Ardian, Apri Nuryanto

ABSTRACT

Abstract

The general objective of this activity is to increase production capacity for UKM Wood Crafts in Gunungkidul Regency. Whereas the specific objective is to produce appropriate technology equipment and machine designs that can improve the SME production process, as well as implement appropriate technology machinery manufacturing techniques that can support production activities. The method used is counseling with lectures, discussions, simulations and direct practices. This is in order to provide understanding, insight, design techniques and techniques for making appropriate technology equipment. In the PPM activity, 2 SMEs and woodworking cooperatives in the Bobung village of Patuk sub-district, Gunung Kidul district were attended. In this PPM activity, participants were limited to 30 people from the target audience. From this training activity, all participants succeeded in mastering the skills of designing fiber skills in making appropriate technology equipment.
