

TRAINING OF HIGH SCHOOL STUDENT INSTITUTION MODEL APPLICATION FOR HIGH SCHOOL COUNSELING TEACHER IN KULONPROGO DISTRICT YOGYAKARTA

by Agus Triyanto, A. Ariyadi Warsito, Septinda Rima Dewanti, Widya Juwita Sari

ABSTRACT

The purpose of this community service activity is to increase the understanding of guidance and counseling teachers in implementing specialization of high school students. The target audience of this activity is high school counseling teachers with a total of 23 Guidance and Counseling Teachers. This training activity uses an independent assignment technique that begins with seminars and discussions on specializations, preparation of specialization service plans, practice of providing specialization services and ends with a case conference of specialization results based on a high school student specialization model. The measuring instrument used to determine the effectiveness of this technique is the evaluation scale of specialization for high school students using the pretest and posttest. The results of the implementation of specialization training activities for high school students for high school counseling teachers showed an increase as seen from the average pre-test score of 17.48 and the average post-test score of 27.00. Thus there was an increase of 9.53 points. Based on this, this service has succeeded in achieving its goals.

Kata Kunci: Independent Assignment Technique, Specialization Model Application for high school students.
