

OBS Studio Training for Teaching Media Development

by Dr. Aris Nasuha, S.Si., M.T., Purno Tri Aji, M.Eng., Moh Alif Hidayat Sofyan, M.Pd., Septian Rahman Hakim, S.Kom., M.Pd.

ABSTRACT

SMK Negeri 1 Pundong is a vocational school that was founded in 2004 and currently has four skills programs, namely Electrical Power Installation Engineering skills competency, Computer and Network Engineering skills competency, Welding Engineering skills competency, and Audio Video Engineering skills competency. One of the problems encountered in the teaching and learning process at SMK Negeri 1 Pundong is related to learning media. Reasons that often arise include limited time to make teaching preparations, difficulty finding the right media, and unavailability of funds.

The method used in this program is training which includes delivery of material, discussion, assignment and evaluation. Teaching Video Making Training through OBS Studio is an approach in the form of a workshop as a form of community service in the Lecturer with Off-Campus Activities program. This training activity was attended by 25 teachers of SMKN 1 Pundong. The output of this activity was the signing of the Cooperation Implementation between SMKN 1 Pundong and D4 Electronic Engineering Study Program. Other outputs are in the form of web news publications on the Study Program website.

The result of this training is an increase in teacher competency in using OBS Studio to create teaching materials. Training participants have produced teaching materials through OBS Studio. Meanwhile, in the long term, the outcome to be achieved is increasing the quality of schools.
