

TRADITIONAL MEDICINE OF SKIN DISEASES IN PRIMBON JAMPI JAWI VOLUME I AND II AND ITS VALIDATION IN PHARMACEUTICAL RESEARCH

by Hesti Mulyani, Venny Idria Ekowati, Doni Dwi Hartanto, Ghis Nggar Dwiadmojo

ABSTRACT

This research focuses on the ingredients contained in *Serat Jampi Jawi Primbon* Volumes I and II. The materials selected in these two manuscripts are ingredients that can be used as ingredients for skin disease remedies. In these two manuscripts there are 69 materials that can be used as a treatment for skin diseases. 61 of them came from plants, one came from animals, and seven came from inorganic materials. These materials are then sought for validation in scientific research in the pharmaceutical world. Out of the 69 ingredients contained in *Serat Jampi Jawi Primbon* Volumes I and II, 49 of them have been studied in pharmaceutical laboratories and can be used as ingredients for concocting drugs related to skin diseases. This is known from the existence of national and international scientific journals in the pharmaceutical field which state that the above ingredients can be used as ingredients to prepare drugs to treat skin diseases. This shows that the 49 ingredients in *Serat Jampi Jawi Primbon* Volume I and II are valid to be used as ingredients to make drugs to treat skin diseases from a pharmaceutical science perspective. While the other 20 ingredients have not been validated in scientific pharmaceutical journals.
