ABSTRACT

Community service activities with the theme "Training of Student Worksheets with Scientific Approaches for High School Sociology Teachers" aims to provide knowledge for high school sociology teachers to the preparation of students' worksheets. The method of implementing community service activities done by lectures and questions and answers, training and tutorials (practice) as well as presentation and discussion of products (student' worksheets); with a total of 14 MH (meeting hours). The target audiences of activities are the teachers of sociology in high School (SMA) in the area of Yogyakarta and Sleman Regency which are incorporated in the MGMP sociology, with the number of participants as much as 27 people. The implementation of community service activities took place on 15 – 16 February 2019, with face-to-face models. The activities are carried out in several phases, namely (1) the delivery of materials and discussion, (2) the practice of instrument drafting skills assessment, and (3) product presentation and evaluation of results. Evaluation of the implementation of activities conducted through process assessment and assessment of results (products). The process assessment is a series of assessments conducted during the training. While the assessment of the results (products) is an assessment of the draft student worksheets that have been created by the trainees.
