

POTENTIAL HAZARD IDENTIFICATION TRAINING FOR POISONING SNACKS PREVENTION

by Anna Rakhmawati, Siti Umniyatie, Evy Yulianti

ABSTRACT

Cases of poisoning after eating snacks still prevalent at the elementary school level. This community development program aims to increase the knowledge, skill of SD Muhammadiyah Sleman teachers and employees in recognizing and identifying potential hazards (contaminants) in food; improving skills in choosing food that was safe on school children snacks. Then accompanying and motivating the cadres of teachers to implement the knowledge and skills was already acquired in preventing poisoning of children so snacks had been consumed nutritionally balanced, healthy and hygienic for student SD Muhammadiyah Sleman; also helping socialize to the parents and the community.

This program consists of three steps. First, it started with hearings, coordination, and consolidation of programs with partners then to identify the participants of 45 teachers and employees SD Muhammadiyah Sleman held on Friday, 12 and August 19, 2016. Second step is held seminar and training on Friday, August 26, 2016. The material was presented by a team of devotees continued to characterize potential contamination skills training. The final activity is the evaluation and improvement. The results showed that this program has been succes in reaching the targets, revealing the participant attendance (100%), an increase of knowledge test (20,47%), participant ability to choose safe snacks (90% participant). Participants also showed their satisfiedness in all aspects.
