ABSTRACT

An information system is a system in an organization which is a combination of people, facilities, technology, media, procedures and controls to get on track critical communications, processing certain types of routine transactions, signaling to management and others to important internal and external events and provide a basic information for decision making. Yogyakarta State University already has many information system to support all needs required by the academic community. So also the Faculty of Sports and Health Sciences (FIKK) has implemented the entire system information that has been developed by UNY. However, it is worth exploring further regarding quality implementation of the use of each academic information system (siakad, online attendance, final assignment guidance as well as the judiciary and graduation system), both by students, lecturers and staff education. Objective: To determine the quality of the existing academic information system implemented at FIKK which includes (1) siakad, (2) lecture attendance and face, (3) SIBIMTA (Final Assignment Guidance Information System), (4) YUDIWIS. Method: This research is research analytical survey with a cross-sectional approach. Target output: Research output this is an Academic Recommendation.
