

IBPE INDUSTRI KERAJINAN KAYU DI KABUPATEN BANTUL

by Dr. Sutopo, M.T., M. Lies Endarwati, M. Si., Chandra Dewi P , SH, LL.M

ABSTRACT

This service program was carried out with a long-term goal to help partners (Ragil Handicraft and Gandok Handicraft) in terms of production technology, improve product quality, improve management, and expand marketing networks. This is done in order to increase export productivity from these partners.

The method implemented in this activity is to assist production equipment and provide various training. The appropriate technology that is being transferred to partners is wood ovens, generators, jointer machines and revitalization of wood lathes. While the training carried out was contract preparation / legal drafting, machine maintenance, timber production process management.

The output of this service activity is that partners have adequate production equipment in the form of wood ovens, generators, jointer machines, and wood lathes, so as to be able to support production activities. From the training activities, it is expected that partners will have various capabilities consisting of machine maintenance capabilities, ability to develop business agreement / cooperation contracts, timber production technology management, so as to be able to support efforts to increase export productivity.
