ABSTRACT

MANAGEMENT PROGRAM OF PROBIOTIC FOR INCREASING SHEEP PRODUCTIVITY AT SUBURB KEPUTREN BANTUL

Tri Harjana dan Heru Nurcahyo

Abstract

The aim of these public services activities are to encourage the group of sheep farmer in Keputren, Pleret, Pleret, Bantul, in order to increase knowledge and skill to applicate the probiotic administration program on sheep husbandry by instrucsional, demonstration and practical strategy.

These activities program administration of probiotic in "NDREBOLO" to applicate the probiotic management program to improve their livestock productivity. The strategies were includes the instrucsional to increase ability to adopt a probiotic administration program on sheep. Through better knowledge and skill in sheep management to increase productivity by promoting sheep meat intensification through to application the probiotic management program to prevent digestive tract disorder, improved feeding, and other management practices. In combination, the probiotic management components can increase sheep product output per unit by as much as to promote the adoption of semi-intensive sheep ranching. The evaluation of the programs use instrument used requires not only monitoring, but also using modeling to compare the authentic assessment.

The overall results showed that under this application of the probiotic management program, sheep farmer could achieve its capability to manage their meat sheep productivity. This is explained by increased their knowledge and skill associated with increased sheep productivity. Successful to applicate the probiotic management program are stimulating higher productivity of sheep production.
