ABSTRACT

One of the Golden Villages that is being developed is in Dusun Krapyak IX, Margoagung, Seyegan, Sleman. The potential developed in Dusun Krapyak IX includes fisheries, agriculture, animal husbandry, education, recreational sports locations such as mini ball fields, archery, outbound arenas and cultural arts development. One of the locations in Kampung Emas, namely the outbound arena, has MCK but does not have a function and is still standing there, so it needs to be arranged so that it can be used as it should, and is comfortable for users. The implementation of Acculturation of Healthy Living Behavior through MCK Arrangement (Mandi Cuci Kakus) is one effective way in an effort to optimize existing MCKs in order to implement Clean and Healthy Living Behavior in Kampung Emas, in order to create a healthy environment as one of the tourist villages located in Seyegan, Sleman, Yogyakarta.

Kata Kunci: Acculturation, Healthy Living Behavior, MCK Arrangement
