

# RENOVATION OF KNOWN COMMUNAL INDUSTRIAL BUILDINGS IN THE CENTER OF THE KAMPUNG EMAS COMMUNITY ECONOMIC AREA KRAPYAK IX, MARGOAGUNG, SEYEGAN, SLEMAN, D.I. YOGYAKARTA (STAGE 2)

by Darmono, Faqih Ma'arif, dan Tien Aminatun

## ABSTRACT

### ABSTRACT

The objectives of this community service (CS) program are: (1) optimizing the waste water treatment industry (WWTI) building for food sales businesses (cafes), (1) overcoming the problem of access to the IPAL building in the form of bridge construction, and (3) repairing the interior of the building IPAL in the form of making cafe tables from used tofu processing tubes, repairing building floors, and making bathrooms/toilets in the Kampung Emas Krapyak IX WWTI building, Margoagung, Seyegan, Sleman.

The method for organizing activities, CS program, is very dependent on the situation, conditions and needs in the field. The mechanism for implementing activities begins with the coordination stage with the local sub-district government and preparing facilities and equipment. After coordination and field surveys were completed, the implementation team procured the materials and equipment needed to build fish ponds, toilets and gazebos as well as other work. All work is carried out by craftsmen according to the type of work, such as: bricklayers, carpenters, ceramicists, and so on. To maintain the quality of the work, during the work process the CS implementation team is always accompanied and supervised by experts in their fields.

Renovation of the IPAL building is very important, in this case specifically the main building. The implementation of WWTI renovation is not only a concept, but also direct implementation. Implementation of the work carried out in planning the renovation of the WWTI construction starts from concept creation, work implementation and maintenance. It can be seen from the description of the arrangement of the conditions of the WWTI location, WWTI buildings and other supporting facilities. The implementation of these activities is carried out by local community members in mutual cooperation, coordinated by the CS activity implementation team and assisted by students.

Kata Kunci: *Key words: renovation, tofu industry, economic area, golden village.*
