

The Relationship Between Social Intelligence and Intelligence Emotional On Motor Development Children Of Era 4.0

by Ridho Gata Wijaya¹,Yudanto², Sujarwo

ABSTRACT

Abstract In the era of the Industrial Revolution 4.0, rapid changes in technology have had a significant impact on various aspects of life, including early childhood education. However, even though this technological transformation continues, social-emotional aspects and motor development in early childhood still have an undeniable urgency. This article discusses the importance of social-emotional aspects and motor development in the context of the 4.0 era. Socio-emotional aspects, such as the ability to interact, empathize, communicate, and manage emotions, remain relevant in an increasingly virtually connected world. These skills form the basis for children's success in various aspects of life, including in dealing with rapid technological changes. While technology can facilitate remote interaction, it is important to ensure that children are able to develop healthy physical and emotional relationships. Motor development also has an important role in the 4.0 era. Fine and gross motor skills play an important role in everyday activities, such as writing, drawing and participating in sports. In the midst of technological dominance, challenges arise in ensuring children have adequate opportunities to play and move physically. The importance of maintaining a balance between technological developments and social-emotional and motor aspects is the main focus. A wise approach to the use of technology is needed, so that children can develop their technological abilities while still having strong social, emotional and motor skills. The educational curriculum must be carefully designed to cover all aspects of this development, bearing in mind that the basics of early childhood development remain relevant amidst changing eras. In conclusion, era 4.0 brings major changes in the way we live and learn. However, the urgency of social-emotional aspects and motor development in early childhood should not be ignored. Through a balanced approach, children can grow and develop holistically, ready to face future challenges with full confidence and broad capabilities.
