

Pelatihan Wirausaha

by Adi Cilik Pierewan

ABSTRACT

This study aims to clarify the relationship of trust and subjective well-being in Indonesia using multidimensional measurement of social trust in Indonesian society. This study will use data obtained from the Indonesian Family Life Survey 5 (2016) which involved 31 662 respondents in 13 provinces in Indonesia and Socio-Economic Survey (Susenas) in 2014, followed by 277 854 respondents representing all provinces in Indonesia. Multidimensional modeling of social trust and subjective well-being will be done by estimation using the Multiple Indicators and Multiple Causes (MIMIC). The expected result is the existence of social trust multidimensional measurement models and predictors of subjective well-being of the people of Indonesia.
