ABSTRACT

This Community Service Program aims to provide a model of ALK activities for PJKR Class of 2020 students to get to know art, culture and local wisdom in the special region of Yogyakarta. The implementation method starts with socialization regarding the technical implementation of activities by considering the safety of the location, distance traveled and suitability to ALK learning objectives. The second stage is preparing material based on the research results, there are 9 activities with 6 different locations, the service team prepares the material used for student assignments in making essays and activity reports during the activity. The output of the PkM that we created is to provide experience, knowledge and skills regarding the meaning of human life. So it can be obtained that the technical results of the activities received a percentage of 79%, while the Activity Objectives received 81%, and the Benefits of the activities received 78% responses from participants. Based on the results of the service and discussion, it can be concluded that PkM in Emas village as a means of improving the welfare and standard of living of the Margoagung community through three blessing programs was declared successful, because the community's mindset changed after the existence of PkM as demonstrated through observations during the mentoring until the end of the service program. The limitations of PkM are only developing three blessing programs from the other nine blessing programs, therefore for next year we will try to develop the remaining six blessing programs.
