

TRAINING STATISTICS PROGRAM FOR THE SCHOOL SCHOOL (SMA) IN THE SPECIAL REGIONS YOGYAKARTA

by Nurhadi, penny rahmawaty, Tony Wijaya, Andreas Mahendro Kuncoro

ABSTRACT

The training of statistics program for high school teachers in economics which is incorporated in the MGMP in the field of economy of Special Region of Yogyakarta is one of the devotion to society ayng implemented by Team devotion to society Faculty of Economics, State University of Yogyakarta. The purpose of this training in addition to realizing the request of the teachers are also the results of suggestions or feedback from the participants of training activities methodology that has been done by members of the Team of service to the community Faculty of Economics, Yogyakarta State University ago that teachers have difficulty in data processing using statistical tools .

The trainees come from high school teachers in the special area of ??Yogyakarta and focus only on improving the ability to understand how to use statistics appropriately and able to use statistical programs in analyzing research data. The hope is that after teacher training becomes more productive in producing useful research in teaching.

The training results show that the trainee is able to choose the statistical tool that is suitable for the purpose of the research. Mastery of training materials is very good. Overall, pesetas find it helpful in developing research proposals, especially those related to the statistical tools used
