

PANCASILA STUDENT PROFILE PROJECT LEARNING MODEL

by Supardi, dkk

ABSTRACT

The Project for Strengthening the Profile of Pancasila and Entrepreneurship Students (P5K) is one of the important themes in learning in schools today. This program is a reinforcement of the Independent Curriculum which emphasizes learning outside the classroom. One of the objectives of implementing P5K is to increase productive learning, not only emphasizing knowledge and intellectual aspects. P5K integrates knowledge, skills and attitudes in projects designed by students with the help of teachers. This program is very important and is the foundation of character education in schools today. This research aims to find a model for implementing P5K in schools, using a case study at SMP 1 Yogyakarta.

This research uses a qualitative research method with a phenomenological approach. This research was carried out at Junior High School 1 Yogyakarta. This research was carried out in May - October 2023. The data sources in this research were students who were determined using purposive sampling. To obtain the desired data in accordance with the problems in this research, the author used a method, namely the interview method. The correct validity of the data used in the phenomenological approach is by checking the data (examination) by the researcher. This research produces descriptive data in the form of interview results. The data that has been obtained is analyzed qualitatively and described in descriptive form. This research also uses atlas.ti software to carry out data analysis.
