ABSTRACT

The objectives of this service program are: (1) increasing partner production capacity by adding several production equipment; (2) transferring several capabilities to support partner-run export businesses; (3) improving partner marketing networks; (4) increasing partner income.

The method used in carrying out this activity is to assist production equipment and provide various training. The appropriate technology that has been transferred to partners is the planner machine, miter saw and table saw. Besides that, assistance was also provided in the form of safety and health equipment. While the training carried out was machine maintenance, preparation of export requirements, and registration of brand / product brands. In addition, a website is also created for each partner.

The results of this activity, the first was given to the partners of planner machines, miter saw and table saw, K3 equipment and set maintenance tools. Second, partners have the capability in machine maintenance, preparation of export requirements, marketing websites and product brands. While the output of this activity is articles for national scale journals and proceedings. increased partners, partners 1 turnover increased by 6%, increased workforce of 1 person as table saw operator, and equipment investment increased by around 12.5%. For partners 2 turnover increased by 8%, adding a workforce of 1 person as a machine planner operator, and equipment investment increased by around 10%.
