ABSTRACT

This community service activity for regional development aims to provide training in writing scientific papers as an effort to continue professional development for elementary school teachers at the Tegalrejo Ministry of Education, Yogyakarta. This activity is carried out using lecture methods, discussions, questions and answers, tutorials and practice writing and submitting articles to journals that already have the OJS system. Lecture, discussion, and question and answer methods are used to provide material that is knowledge or insight into the self-development of professional teachers, scientific publications for elementary school teachers, and innovative work in elementary schools. The results of lecturers' activities outside campus provide benefits to the target audience. These benefits come from cognitive, affective and psychomotor aspects. Another impact of this program is strengthening IKU, especially IKU 3, namely (1) as much as 100% of training activities are carried out according to plan, where varied training activities are the main key in increasing the quality of the training process, (2) through this training activity participants are declared successful in having understanding of the concept of writing scientific papers with an average score of 8.3 in the very good category. The increase in participants' understanding can be seen from the pre-test and post-test results which experienced an increase of 3.5, and (3) participants can be declared skilled in compiling scientific papers based on indicators, able to search for target journals, able to search for journal articles, able to use reference management, able to compose scientific articles, able to submit articles.

Kata Kunci: *scientific articles, professionalism, elementary school*
