ABSTRACT

Jatinom Village is located in Jatinom sub-district, Klaten Regency, an area located approximately 36 km from Yogyakarta City, or approximately ± 10 km from Klaten City. The majority of the people in Jatinom village make their living as farmers who cultivate the land for rice fields and farming. In the tourist area of Jatinom village there is a fishing pond area. Fishing is a hobby that has quite a lot of fans in the area, it is not uncommon for many anglers to stop and fish at the fishing pond. However, at the fishing location there are no adequate supporting facilities. One of them is worship facilities. Fishing usually takes up a lot of time, so anglers need prayer facilities (musala) close to them. So, to increase comfort for visitors to fishing ponds in Jatinom village, it is very necessary to build prayer facilities (musala) starting with planning prayer facilities (musala) in Jatinom Tourism Village, Kec. Jatinom, Kab. Klaten. Based on the conditions above, the civil engineering and planning education department of FT UNY in collaboration with the local community agreed to provide assistance in planning and preparing RAB for the construction of worship facilities at tourist village locations in the Jatinom tourist village area, Klaten Regency, Central Java with the aim of improving comfort for tourists who stop at the fishing location

Kata Kunci: *jatinom, worship, tourism, comfort*
