

INVESTIGATION OF SELF-EFFICACY IN FORMING WORK READINESS: CASE STUDY OF VOCATIONAL SCHOOLS IN YOGYAKARTA

by Rosidah, Danang Setyaramadani, Rizki Pratama Johanis Paransa

ABSTRACT

This research aims to reveal the extent to which self-efficacy is formed in order to prepare work readiness at Vocational High Schools in the Special Region of Yogyakarta. This research is considered important to understand the process of self-efficacy in DIY Vocational Schools in the context of MBKM, especially PK Vocational Schools, which has not yet been widely researched. The link and match issue which was felt to not be in line with IDUKA's expectations became the main basis. The research approach we use is qualitative research. The data collection technique chosen was in-depth interviews as primary data and selected documents and journals as secondary data.

The data sampling locations were at SMK Negeri 1 Wonosari, SMK Negeri 1 Godean, and SMK Negeri 1 Bantul. The main resource persons were fifteen people consisting of one principal, two teachers and two students for each school. The data collected was then reduced according to the context of the Center for Excellence Vocational School in the MBKM program before being presented in the research results and discussion.

The results of the research are that all schools have implemented programs that increase a student's self-efficacy in establishing work readiness. This program is implemented independently and in collaboration with IDUKA. Character development is built through the Pancasila Student Profile Strengthening Project (P5) program. Specifically for technical capabilities in areas of expertise using the IDUKA approach. Intern teachers, cooperation in establishing teaching factories so that each school is able to have a production laboratory according to its strengths. Apart from that, the school also provides examples of situations in the world of work in learning and has internal programs such as internship preparation which aims to provide initial adaptation to the work environment.
