ABSTRACT

ACHIEVEMENT SURVEY OF GRADUATES OF SPORT TRAINING EDUCATION STUDY PROGRAM GRADUATES IN GETTING A DECENT JOB

ABSTRACT

The readiness of graduates to compete in the industrial world is of course the responsibility of universities, faculties, and study programs. One of the efforts that can be made by the Sports Coaching Education Undergraduate Study Program is to manage and develop a quality-oriented learning process. The Study Program is expected to be able to align its learning curriculum with the needs of the industry, which is constantly changing and developing every year. Thus, the graduates produced can be absorbed by agencies in the labor market or can create jobs and compete in the industrial world.

To help the Study Program maintain and improve the quality of learning, the Ministry of Education and Culture in this case the Director General of Higher Education, establishes Key Performance Indicators (IKU) for state universities. KPI is one of the keys in regulating the performance of state universities in realizing their performance targets. In this tracer study, the research team focused on measuring KPI 1, which means that graduates get decent jobs.

The research design used in this research is descriptive quantitative research using survey methods. The implementation of the Tracer Study research is basically carried out by following three stages. The initial stage of implementation is the development of concepts and instruments (concept and instrument development). The second stage is related to data collection (data collection). Respondents in data collection were graduates of the Sports Coaching Education Undergraduate Study Program, FIK UNY. The output in this research is scientific articles published in the National Journal.
