ABSTRACT

ABSTRACT

Along with the enactment of the National Occupational Map for the Automotive Sector at the end of 2020, and the new reference SKKNI (SKKNI 097-2018, 105-2018, 147-2019) requires all Professional Certification Institutions (LSP) in the automotive sector to formulate new competency test schemes and materials. This PPM activity aims to provide training (workshops) to assessors in the automotive technician field to formulate competency test schemes and competency test materials based on SKKNI 097-2018. The target of this program is assessors who are members of LSP OTOINA Yogyakarta.

The method used to train assessors is through Focus Group Discussions (FGD) and Workshops involving relevant industry parties. In the FGDs and workshops, a competency test scheme and competency test materials (MUK) for junior chassis and suspension technicians can be arranged which refers to SKKNI 097-2018.

The result of this PPM activity is that assessors can understand the concept of competency test schemes and are able to prepare competency test materials.
