ABSTRACT

The aim of the research is to improve the kindergarten teachers' knowledge about Kurikulum 2013. The second aim of the training is to develop more understanding and skill of kindergarten teachers in designing culture-based weekly lesson plans theme. The training was carried out based on the result of community service progame done by Joko Pamungkas in 2005 in which not all of the teachers were able to autonomously develop lesson plan in Kurikulum 2013 criteria. The culture theme was also rarely used in the early chillhood education learning because of the opinion that it is hard to be developed. Methods used in the training were in the form of lecturing and workshop. The lecturing method covered materials upon culture, scientific method, and the development of Kurikulum 2013. Objects of the community service programe were 37 kindergarten teachers in DIY. As the result of the community service programe, teachers were able to develop culture-based lesson plan. The culture themes which can be developed were culture, Ramadhan, and recreation. More than 75% of the participants were able to understand the development of Kurikulum 2013 in line with the materials in the training.
